

## CMS Qualified Entity Phase 3 Reporting Calculation Methodology

### Alternative Measure Selected

Potentially Avoidable Emergency Department Visits

### Numerator

The numerator of the potentially avoidable ED visits rate represents the volume of ED visits in Virginia from 2017-2019 containing a primary ICD-10 diagnosis code categorized as being potentially avoidable. The numerator was defined using the Oregon Health Authority's (OHA) methodology on avoidable emergency department visits, derived from the Medi-Cal potentially avoidable ED visits methodology (See Appendix, Exhibit 1). Per the OHA methodology, the query elements and construction logic for the numerator are as follows:

Figure A – Numerator Construction Logic

Field	Description/Rationale
Incurred Year	The year during which the ED visit occurred. Used to break out the data for volume trends over time
Payer LOB	Line of business (LOB) or insurance type of the patient containing a value of Commercial, Medicaid, or Medicare. Used to break out the data for observing trends in volume across payer types
Member County	The county associated with the patient based on the patient's street address. Used to distinguish between geographical areas based on patient's residence
Primary ICD Diagnosis Code	The main or principal diagnosis ICD (International Statistical Classification of Diseases and Related Health Problems) code associated with the service. Used to identify potentially avoidable ED visits
Total Utilization	A summation of the count of distinct services. Utilization counts differ according to the defined HCG (Health Cost Guideline) Line Code grouping system created by Milliman to rollup services into groups. Using Milliman's methodology for the HCG Line grouping <i>O11 = Emergency Room</i> , Total Utilization represents the number of unique ED visits. Used to represent the volume of ED visits

Condition	Description/Rationale
Incurred Year = 2017, 2018, 2019	Only data for years 2017, 2018, and 2019 will be used to ensure the proper reporting period.
Payer LOB ≠ Unknown	Claims for individuals without an identified insurance type will not be included.
HCG Line = O11 – Emergency Room	Only claims categorized as containing an ED visit not resulting in an admission will be used.
Primary ICD Diagnosis Code = OHA Avoidable ED Numerator Diagnosis Code Set (See Appendix, Exhibit 1, Pages 3-10)	(See Appendix, Exhibit 1, Pages 1-3)
CPT Procedure Code ≠ OHA Psychiatry Value Set specifications (See Appendix, Exhibit 1, Page 10)	(See Appendix, Exhibit 1, Page 10)

ICD Procedure Code ≠ OHA Electroconvulsive Therapy Value Set specifications (See Appendix, Exhibit 1, Page 10)	(See Appendix, Exhibit 1, Page 10)
--	------------------------------------

## Denominator

The denominator of the potentially avoidable ED visits rate represents the volume of ED visits in Virginia from 2017-2019 that did not result in an admission. ED visits not resulting in an admission were defined using Milliman's HCG Line grouping *O11 = Emergency Room*, which corresponds to the HEDIS 2018 specifications for identifying emergency department visits. The following tables outline the fields and conditions used to query the data:

Figure B – Denominator Construction Logic

Field	Rationale
Incurred Year	(See Figure A)
Payer LOB	(See Figure A)
Member County	(See Figure A)
Primary ICD Diagnosis Code	(See Figure A)
Total Utilization	(See Figure A)

Condition	Rationale
Incurred Year = 2017, 2018, 2019	(See Figure A)
Payer LOB ≠ Unknown	(See Figure A)
HCG Line = O11 – Emergency Room	(See Figure A)

## Potentially Avoidable ED Visits Rate Calculation

Total Utilization for Potentially Avoidable ED Visits (Numerator) / Total Utilization for All ED Visits (Denominator)

## Category Assignment

The potentially avoidable primary ICD-10 diagnosis codes with the highest values for Total Utilization statewide for ED visits not resulting in an admission were categorized by visit type. VHI based these category assignments on Milliman's Primary ICD Diagnosis Code Rollup methodology. (See Appendix, Exhibit 2)

## Ambulatory Care: Avoidable Emergency Department Visits

### Measure Basic Information

**Name and date of specifications used:** HEDIS® 2018 Technical Specifications for Health Plans, Volume 2, and California Department of Health Care Services Medi-Cal Managed Care Division's statewide collaborative quality improvement project on avoidable ER visits. The Medi-Cal Managed Care Division has stopped maintaining the measurement specification, and in order to accommodate the transition from ICD-9 to ICD-10 coding since October 2015, OHA utilized CMS General Equivalence Mappings (GEMs) to create the ICD-10 code set for identify qualifying numerator ED visits.

**Measurement Period:** January 1, 2018 – December 31, 2018

**2018 Benchmark:** N/A

**Measure changes in specifications from 2017 to 2018:**

OHA is using HEDIS 2018 specifications for all 2018 measures. Changes from HEDIS 2017 to 2018 include:

- HEDIS 2018 further clarifies the methods to identify an ED visit that resulted in an inpatient stay for exclusion: When an ED visit and an inpatient stay are billed on separate claims, the visit results in an inpatient stay when the admission date for the inpatient stay occurs on the ED date of service, or on calendar day after. An ED visit billed on the same claim as an inpatient stay is considered a visit that resulted in an inpatient stay.
- HEDIS 2018 removed 'AOD Rehab and Detox Value Set' from required exclusion; this value set only contained ICD-PCS inpatient procedure codes, and these services may still be identified for exclusion based on chemical dependency diagnosis codes (included in the Mental and Behavioral Disorders Value Set).
- HEDIS 2018 Ambulatory Outpatient Visits value set deleted one CPT code 99420.
- HEDIS 2018 Mental and Behavioral Disorders Value Set added 13 ICD-10 diagnosis codes: F32.81, F32.89, F34.81, F34.89, F42.2, F42.3, F42.4, F42.8, F42.9, F50.81, F50.89, F64.0, F80.82.
- HEDIS 2018 ED Procedure Code Value Set added 51 and deleted 22 CPT codes.

OHA continues to use the ICD-10 'Avoidable ED Numerator Diagnosis Code Set' from measurement year 2018, which is based on the Medi-Cal defined ICD-9 codes, and crossed-walked with CMS General Equivalence Mappings (GEMs).

**Measure Details**

**Data elements required denominator:** 1,000 member months. The measure is based on the Ambulatory Care: Emergency Department Utilization measure.

**Required exclusions for denominator:** None.

**Deviations from cited specifications for denominator:** N/A

**Data elements required numerator:** Step 1, Identify all ED visits:

See HEDIS® 2018 Technical Specifications for Health Plans (Volume 2) and Value Set Dictionary for details on identifying emergency department visits.

Count each visit to an ED that does not result in an inpatient encounter once; count multiple ED visits on the same date of service as one visit. Emergency Department visits are specified by the following codes:

ED Value Set	
CPT	UB Revenue
99281-99285	0450, 0451, 0452, 0456, 0459, 0981

OR

10021-69990* See HEDIS 2018 for details.		23

\*Total of 5,777 CPT codes are included in the HEDIS 2018 'ED Procedure Code' Value Set.

Do not include ED visits that result in an inpatient stay (Inpatient Stay Value Set). When an ED visit and an inpatient stay are billed on separate claims, the visit results in an inpatient stay when the admission date for the inpatient stay occurs on the ED date of service, or on calendar day after. An ED visit billed on the same claim as an inpatient stay is considered a visit that resulted in an inpatient stay.

**Step 2, Identify a subset of avoidable ED visits:**

Avoidable ED visits are identified as those visits with a primary diagnosis that matches a list of ICD-9 diagnosis codes defined by the California Department of Health Services<sup>1</sup>. OHA utilized CMS 2016 General Equivalence Mappings (GEMs) to update numerator avoidable ED visits into ICD-10 codes:

**Required exclusions for numerator:** Mental health and chemical dependency services are excluded, using the following codes. Note OHA applies the exclusions at the claim line level. OHA keeps all paid claim lines, as a result, unless the entire claim was denied, the paid lines without mental health and chemical dependency services may still pass through the algorithm and be count towards qualifying visits.
